I'm personally quite happy with the new version. Lightroom has come a long way; it's not as bloated as an earlier version and the UI is more responsive. Lightroom also automatically saves the preview images of LR. Users can now build libraries, batches, unload images and much more. One thing that concerns me a bit is the way we have to save our images and now that we're on the cloud, it's totally different to how it used to be. I found this review very helpful and it's nice to see the improvements that have been brought to Lightroom with the new version. For me I think it's a bit of a mixed bag. While the exporting has improved and the new file system is a lot easier to work with than before, the importing has necessarily not improved as much. I think this, and the slight loss of speed, makes the program more of a Frankenstein than before. I still think Lightroom is better than most other software out there for what it does - but I still have reservations that it could be better still. It was really great to see the feedback about the final release. It's great that you can go in to an old catalog and see the Image Size, so now you know what file size you need for printing or whatever. And the metadata tags are a LOT more helpful than before. I need to have that red-themed catalog I made a few years ago. I also liked the fact that the "Develop" meter lets you know if the image even is worth having in a Developed state. There were a few things that I'd like to see changed, such as the brush search. I also liked being able to see how much memory the catalog was using up.

Since Photoshop was first released, it has been used for many other purposes such as enhancing video footage and creating false or realistic backgrounds for photographs.[4] Photoshop is now considered a standard program in the field of computer graphics. Photoshop enables customers to have highly robust workflows that are set up in advance to make above average work even better. It can easily work as a standalone or hybrid tool – for example, it came to market a few years ago with support for Adobe Bridge and Lightroom as well as consistent workflow functionality. However, integrating the two sets of users for a future partnership would require a great deal of work to get us all working in the same tool.
