It's no secret that the Apple App Store has been a huge success. In the nearly four years since its launch, Apple has sold three billion apps and iTunes has become an indispensable seller of multimedia content. However, we've also encountered a few glitches and customer service issues. A loyal MacRumors reader sent me screenshots to show the kind of problems he's run into when trying to use the App store. He noted that the number of apps in the basic category seems to be almost nonexistent, he also pointed out that certain apps have been removed from the store, he has problems with apps requiring a subscription after he bought the app, and he's having problems with apps using the screen where he can't find any version of the app to select. Based on these screenshots, I think that many iPhone owners have run into a few of these issues as well. Apple usually resolves these issues right away, but keeping in mind that an iPhone has a smaller screensize and 60% of Apple's app sales may come from small, spare computers like the iPad, it's important that Apple fix these issues. Here's hoping Apple can provide some kind of solution. Silhouettes are back. In early 2019, Adobe rolled out the new Silhouette tool to Photoshop, replacing the Wacom Cintiq Pen and Touch technology they've owned since the program launched in 1998 and a similarly poor alternative sold separately from the use of a standalone pen. Almost immediately, Adobe started productizing other old and traditional Wacom stylus drawing apps. Now that the Silhouette tool has been fully-staged and fully-funded, it's time to very seriously consider the future of the creative artists among the company's top customers.

Photoshop is definitely the right tool for that. From the most basic linear drawing tools to the powerful artistic features, there's no end to its functions and applications. As time progressed, I gained experience working in information-centric design, visual design, brand identity, UX, information architecture, and pattern making. I've been working for DaVinci Resolve for a while now, and I'd like to share under what circumstances I got into it. Photoshop will be introducing a brand new blend tool, which allows you to recreate visual effects and 3D layers, making them easy to handle, match with variables and move around. While creating a 3D layer, you can move it up or down, change the depth of its layers and bonds, alter the volume of it, as well as rotate the layer along with it, without altering its original position in the photo. This new tool is called 5D Blend, as it allows you to manipulate images based on five different components: depth, time, color, space, and luminance. New in Photoshop will be a tool that integrates cutting-edge machine learning capabilities with extreme professional photographer techniques. It can recognize edges and tackles colors, shadows, and highlights, as well as geometry, as well as remove blemishes, wrinkles, and other unwanted tasks on your photos. There will be a new feature in Photoshop which will let you select a color channel and correct that particular color to bring it back to the right hue. There will be a number of other automatic color-correction features coming in the future, too, which will enable you to automatically correct red, green, and blue color channels, all with the click of a button.
